Group Assignment: UI/UX Design Using Figma

(Groups of Two (2) or Three (3) Students Only — Not More Than Three Members Per Group)

Course: E-Commerce and Web Application

Date Issued: 26-05-2026

Designing a User-Friendly Mobile or Web Application Prototype Using Figma

Objective

The purpose of this assignment is to help students design modern, user-friendly, and interactive mobile or web application interfaces using Figma.

Students will practice:

- UI/UX design principles
- Wireframing
- Interface design
- Prototyping
- Responsive and accessible design concepts

This assignment focuses on creating visually appealing and user-centered e-commerce or web application solutions.

Group Activity

- Students must work in groups of **two (2)**.
- Each group will collaboratively design **one application prototype**.
- Both students must actively participate in:
 - Research
 - Design

- Wireframing
- Prototyping
- Documentation

Task Description

Each group must design a complete application prototype using **Figma**.

Choose ONE System

Groups may choose one of the following systems:

- E-learning application
- Online shopping application
- Hospital appointment system
- Food delivery application
- Banking or digital wallet application
- School management system
- Event booking system
- Fitness tracking application
- Any other approved web/mobile application idea

Deliverables

1. Problem Statement

Clearly explain:

- What problem does the application solve?
- Who are the target users?
- Why is the system important?

2. User Persona (At Least One)

Create at least one user persona including:

- Name
- Age
- Occupation
- Goals
- Challenges or frustrations

3. User Flow Diagram

Show the sequence of steps users follow in the system.

Example

Login → Home Page → Select Product → Checkout → Payment Confirmation

The flow should clearly demonstrate navigation within the application.

4. Wireframes (Low-Fidelity Design)

Create simple layout sketches of the application.

Requirements

- Minimum of **4 screens**
- Focus on structure and layout
- Use placeholders where necessary

Example Screens

- Login/Register
- Home Page
- Product or Service Page
- Profile Page

5. High-Fidelity UI Design

Design polished and visually appealing interfaces.

Requirements

- Minimum of **6 screens**
- Use:
 - Colors
 - Typography
 - Icons
 - Images
 - Proper spacing and alignment
- Maintain consistency across all screens

6. Interactive Prototype

Create clickable interactions in Figma.

The prototype should:

- Connect screens properly
- Demonstrate user navigation
- Simulate real application usage

Examples

- Button interactions
- Page transitions
- Navigation menus

7. Accessibility Considerations

Ensure the application is easy to use for different users.

Include:

- Readable font sizes
- Good color contrast
- Clear navigation
- User-friendly layouts
- Consistent design elements

Design Requirements

Groups must:

- Use original design ideas
- Create responsive/mobile-friendly layouts
- Maintain consistency in the interface
- Provide clear feedback to users through the interface
- Apply modern UI/UX practices

Recommended Figma Features

Students are encouraged to use:

- Frames
- Components
- Auto-layout
- Prototyping tools

- Icons and design systems
- Grids and alignment tools

Grading Criteria (100%)

Component	Marks
Problem Definition	10
User Persona & User Flow	15
Wireframes	15
UI Design Quality	25
Prototype Functionality	20
Accessibility & Responsiveness	10
Creativity & Innovation	5

Submission Requirements

Each group must submit their work through a well-organized **GitHub repository**.

Required Deliverables

1. Figma Project Link

- Include the shared Figma project link in the repository README.md.
- Ensure the link permissions allow viewing access.

2. Design Screens and Assets

- Upload all exported screens, assets, and related design resources directly into the repository.
- Organize files using folders such as:
 - /wireframes
 - /high-fidelity-designs
 - /assets
 - /prototype

3. Documentation in Markdown Format

All reports and documentation must be written in **Markdown (.md)** format.

The documentation should include:

- Group member names
- Selected application/system
- Problem statement
- User persona
- User flow explanation
- Brief explanation of the design
- Features implemented
- Accessibility considerations
- Challenges faced
- Conclusion

4. README.md Requirements

The repository must contain a professional README.md including:

- Project title
- Course name and code
- Group member names and registration numbers
- Selected application/system
- Brief project overview
- Figma project link
- Repository structure
- Instructions for accessing project files

5. GitHub Repository Organization

- Repository must be clean, structured, and professional.
- Use meaningful file names and folders.
- Ensure all uploaded files and links are accessible.

Bonus Marks

Additional marks may be awarded for:

- Dark mode design
- Advanced animations/interactions
- Mobile and desktop responsive versions

- Additional creative screens/features

Deadline

Submission Deadline: Sunday, 21st June 2026

All group members are encouraged to submit their work before the deadline to avoid penalties.

Late submissions will receive **half of the allocated marks.**

No submissions will be accepted after **Monday, 1st July 2026.**

Important Notes

- All submitted work must be original.
- Avoid copying existing application designs.
- Ensure equal participation among group members.
- Repository plagiarism or duplicated designs may lead to disqualification.
- Proper GitHub organization and documentation will be considered during evaluation.

Submission use this [google Form](#)

“Every successful application starts with understanding users and designing experiences that solve real problems.”
